PDF Merger in Python

Problem:

I was struggling to merge PDF files offline, and some of these PDFs contained private or sensitive data. Therefore, I felt hesitant to trust third-party websites with my documents, as uploading them online could create privacy concerns.

Solution:

To resolve this problem, I explored online resources for inspiration and learned about Python's **pypdf module**. Using this module, I developed my own fully offline PDF Merger.

I now use this tool to merge PDF files locally without uploading sensitive documents to online services.

Python PDF Merger
